SIP Trunks
High Performance Business VoIP

$22
Per Month
AUS Local - National - Mobile
CALLS INCLUDED
Minimum 2 Channels

Reduce Your Telco Costs by Up to 50%

BusinessCom SIP Trunks are the perfect VoIP solution for businesses looking to dramatically reduce their telco costs and gain superior functionality from their business phone systems. They can either be connected to an existing on-premise PBX system or programmed into a IP phone and used as a stand alone telephone line with its own telephone number.

Exceptionally Cost Effective

SIP Trunks are the most cost effective way of delivering business phone line capacity to a PBX phone system. Significantly reduce your line rental and call costs.

Fully Portable and Scalable

No physical telephone lines to connect or relocate. Additional call capacity can be activated almost instantly. Connect or disconnect call lines to suit your current business requirements.

Superior Functionality

Delivering the ultimate in business flexibility, SIP trunks can be deployed in a variety of ways including PBX Systems, IP phones, a mobile app or a softphone application.

Microsoft Teams
Microsoft 365

Compatible with Microsoft 365 and Microsoft Teams.

IP PBX Systems

Compatible with 3CX and other IP PBX systems.

Auto Failover

Automated failover in the event of internet outages.

- Local, National and Mobile Calls Included.
- Auto Failover and Business Continuity Functions.
- Use Your Existing Number or Connect a New One.
- No Set Up Fees or Long Term Contracts.

Deploy SIP Trunks Across Multiple Devices

SIP Trunks can be deployed in a number of ways including PBX, IP Handset, a Softphone Application or a Mobile App. This makes them exceptionally versatile and able to fit almost any business requirement.

PBX Systems

BusinessCom SIP Trunks can be used with all major PBXs and phone systems that have IP capability. Program them directly into an existing PBX and replace existing telephone lines to reduce line rental and take advantage of cheaper or included calls.

IP Phones

SIP trunks can be programmed directly into an IP phone which then becomes a functioning telephone with its own call line and phone number. To make and receive calls, all you have to do is connect the IP phone to an existing broadband service.

Softphone Apps

Turn your PC or laptop into a fully functional phone by programming a SIP trunk into one of the many softphone applications available. Or use a mobile app to call from your mobile phone. Take advantage of local Australian call rates when travelling overseas.
